EndNote X3 - Formatting References in a Numbered Style

What is a "numbered style"?

In a numbered style, references are indicated by a number in the text. The number is often printed as a superscript. At the end of the paper, the references are given in full and arranged by the numbers which they have been assigned.

Do not confuse a numbered style with a footnote (or endnote) style. With a footnote/endnote style, it is the footnotes/endnotes which are numbered. The references are then inserted into the footnotes/endnotes, along with other text.

The University of Queensland has some excellent information on how to format references in a Footnote/Endnote Style. See the FAQ's on the University of Queensland Library's website at: http://www.library.uq.edu.au/endnote/footnote.html

It is possible to change the output style in a paper that you have already formatted with a different style. This situation could arise if you decided to submit the article to a different journal.

Just use the Styles Manager on the ribbon to select another style eg. Nature. EndNote will reformat the paper in this new style. If you choose the Nature style, your paper might now look something like this:

**Recent Developments in Personal Bibliographic Software: a Critical Review**

By J.W. Bloggs

Since the 1980s, there have been a variety of software products on the market which can be classified under the general heading of Personal Bibliographic Software. All of these products perform the same two basic functions: they allow the user to maintain a database of bibliographic references and they permit the generation of a bibliography containing some or all of those references.

Substantial developments have taken place in the functionality of personal bibliographic software. Today it is not difficult to find a product that can automatically import references from a CD-ROM or web database and format both in-text citations and a list of references in a wide variety of styles.
